Health Economist

Role Description

In this role, you will be responsible for developing health economic assessments and supporting the company's marketing and fund-raising activities by producing powerful health economic cases for the company's products. Specific responsibilities include:

- Developing program objectives, strategies and study methods on health care. Designing and executing research studies. Leading and directing plans to calculate various costs related to health care and the company's products.
- Utilising research programs on health economic topics. Suggesting new health outcomes for treatment and prevention of health issues. Evaluating current and proposed strategies and interpret findings.
- Pro-actively identifying market access opportunities for the company through effective planning and development of financially sound business proposals.
- Contributing to strategic discussions/market access planning processes to enhance the effectiveness of corporate strategies.
- Communicating economic assessment results to appropriate internal and external audiences.
- A more detailed role and job description is available by contacting us at jobs@biosignatures.com

Package

Job Type: Full-time

Salary Range: up to £40,000 depending on skills and experience

Benefits: including 25 days holiday, pension scheme and flexible working.

Desired Background and Skills

We are looking for another key member of the team to help us deliver our vision of transforming lives by diagnosing disease early. Specifically, we are looking for individuals with many of the following skills and qualifications:

- A bachelor's degree (2:1 or higher) in health economics, health policy or a closely related subject and a strong academic record; appropriate postgraduate qualifications will add to the strength of the application
- Minimum 2 years health economic experience in diagnostics or a related health area. Experience in successful implementation of plans and achievement of objectives.
- A strong work ethic and a solution-focused 'can do' attitude combined with intellectual curiosity and creativity
- A passion for science, patient safety and taking responsibility for the health economics of medical device products
- The ability to work effectively in teams in a fast-paced, dynamic and cutting edge environment

Desirable attributes:

- Post-graduate qualifications in health economics, health policy or a closely related subject
- Detailed understanding of the UK health care system and associated health economic models
- Some knowledge of health economic models in other jurisdictions, particularly the USA
- Some knowledge of proteomics and related lab analysis processes (e.g. 2d gel electrophoresis)

How to Apply

Send your CV and anything else you think supports your application to jobs@biosignatures.com and we'll get in touch.

About Biosignatures:

Imagine how many lives we could save if we could diagnose disease long before symptoms became apparent. How many people would live longer, have more productive lives, have a better quality of life and have more time with their loved ones? That's our mission at Biosignatures, we want to transform lives by diagnosing disease early.

Our cross disciplinary team spans clinical trial initiation and management, biobanking, sample processing, biochemistry, proteomics, glycomics, fluorescent image analysis, AI, bioinformatics, biostatistics and diagnostics.
